Last Tdap: 10/2020	COVID-19 Vaccine date(s): 4/2/2021; 4/30/2021
Last Flu Vaccine: 9/2020	
Last Zoster Vaccine: 4/2018	

Provider Notes:

The patient is a 70-year-old with a history of hypertensive borderline hypercholesterolemia, and hypercoagulability with multiple pulmonary emboli in the past who presented asymptotically with a wide complex tachycardia that could not rule out ventricular tachycardia in the recovery phase of a full Bruce exercise tolerance test. The patient was admitted for Holter monitoring times 48 hours. He was ruled out for a myocardial infarction. He was started on a cholesterol lowering agent, his Coumadin was held, and Heparin was started in the case of an invasive procedure.
